

SI No.	Research Problem
1. ✓	Configuration design of Supersonic UAV's ✓
2.	Air intake design optimization for various operating conditions of Micro Gas Turbine
3.	Enhancement of BMEP of Indigenous 180HP Engine
4.	Air intake design optimization for various operating conditions of MGTE
5.	Design and Development of High Temperature Material (Carbon-Carbon Composite) for Airframe Skin
6.	Design and Development of Alternative Air Bearings for High-Speed ACM Rotor Used in Cold Air Unit of Aircraft.
7.	Trajectory optimisation problem for terminal phase of subsonic cruise missile
8.	AI Based Control Law Design for UAV
9.	Multiple RPA Simultaneous Flight
10.	GRAMS studies for futuristic UAVs
